

7. Animal Class

Create an **Animal** class to represent animals with their name and age. The class should keep track of the total count of animals. It should have methods to display animal information, validate the age and check if it is not positive raise an Error, and set a new name for the animal.

Necessary Tasks:

- Allow the class to create an animal with a given species, and provide a method to set or update the species of the animal.
- **get_species_count**: Implement a method to get the count of animals based on their species.
- **validate_age_range**: Add a method to validate age to be positive.
