11. Lambda – Datetime

Write a python program to extract year, month, day and time from a datetime variable using Lambda.

a) Use datetime liberary to get present datetime and extract mentioned attributes with lambda functions you wrote.

b) Get datetime as string input and convert it to datetime object then extract year, month and …

```
Enter datetime: 2022-09-15 09:45:30

Year: 2022
Month: 9
Day: 15
Time: 09:45:30
```

Note: For each exercise you need to follow Functional Programming rules.
