9. **String Formatting**

   Create a function that prompts the user to enter their name and birth year.

   Calculate their current age and display a message using string formatting that

   says "Hello, [name]! You are [age] years old."

   ```
   Enter your name: John
   Enter your birth year: 1990

   Hello, John! You are 33 years old.
   ```
